Serials - ULM is currently involved in an extensive serials project. Charles Hughes, Coordinator of Cataloging at ULM, is leading the project. The project involves changing the serials call number so that only the stems of the call numbers appear in iLink. He will discuss the rational behind the project and the steps involved in implementation. Janie Branham, Head of Serials at SLU, will discuss the Sirsi’s serials control enhancement forum. Attendees from other sites are welcome to share their experiences with serials.
